

AVS VPN Panel v2.0

USERS MANUAL

1. Introduction
2. Logging in
3. Home Screen
4. Credits
5. Users
6. Creditless Trials

1. Introduction

Thanks for joining us and welcome to the team. The guide is to assist you through the backend VPN Panel v2.0 to accompany your VPN app.

The panel as been designed for ease of use. Everything you need to run a successful Android system is included in the panel. From user control to more specific e-mail lists, VPN Panel v2 is vastly improved in comparison to it's earlier version.

In this guide we will cover each section of the panel. Keep it handy, there will be a time when you need it.

2. Logging in

Enter your username and password to login. You can reset your password using the link under the login button.

3. Home screen

View a line graph of new users and cancelling users (1) over a number of days.

View the total amount of Trial users v Paying users (2) as a total number of all your app users.

Below you can choose to download your users email addresses (3). Choose to download certain user types or all users. The number of user email addresses will be displayed (4), just click the download button to take the list ready for uploading to your email marketing systems.

4. Credits

Once you have exhausted your pre purchased credit you will need to top up. In here you can choose from a number of purchase options (2). Once purchased they will automatically be added to your account (1).

5. Users

In this section you can control your users. You can accept payments outside of the application and give manual access or remove access to/from users that have verified their email address in the application.

The most important thing to do here is adding a valid Subscription ID from PayPal or Stripe (3). We suggest that you buy access yourself so that you know you always have valid data.

Grant access for different periods for up to 12 months (1) for any app user who has registered their email address. For each month given the corresponding amount of credits will be deducted from your account.

Remove users from your system by searching for them based on their email address (2). It is important to note here that you must cancel their subscription in PayPal or Stripe after taking this action.

The screenshot shows a web interface with a navigation bar at the top containing 'Home', 'Credits', 'User Control' (highlighted), and 'Creditless Trials'. A 'Logout' link is in the top right. The main content area is divided into three sections:

- Grant access:** A form with 'User Email Address' and a dropdown menu set to '1 day'. A green 'Update' button is below. A callout '1' points to the input field. A grey box on the right contains the text: 'This feature will not work unless you have added a valid subscription ID from PayPal or Stripe in the bottom section. Access will consume credits based on the duration of access given.'
- Remove access:** A form with 'User Email Address' and a green 'Update' button. A callout '2' points to the input field. A grey box on the right contains the text: 'Removing a users access here will not end their subscription payment. It will only end their access and stop their credit consumption. You must end the users subscription in Stripe or PayPal as well as removing access here.'
- Add a valid subscription ID:** A form with 'Subscription ID from PayPal/Stripe' and a green 'Save' button. A callout '3' points to the input field.

6. Creditless Trials

Your users VPN trials will consume your VPN credits at their normal rate. To prevent any trials consuming your credits you can turn on creditless trials for \$24.99/month. Allowing you unlimited free trials without using a credit during the trial period. Credits will only be taken when the user starts paying.

In the image we have displayed both options, in the your live panel you will only see the option to change what you do not currently have. To turn on trials you will see (1). If you already have creditless trials you will see (2). Any action you take here is instantly added to your account the next time a user signs up.

The screenshot shows a web browser window displaying the AVStream VPN Panel v2.0 interface. The browser's address bar shows the file path: file:///C:/Users/Fiss/Desktop/Work/AVSVPN/Panel/Extras.html. The page has a yellow background and a navigation menu at the top with 'Home', 'Credits', 'User Control', 'Creditless Trials' (highlighted in green), and 'Logout'. The main content area is divided into two sections. The first section, 'Turn on Creditless Trials', features a large '1' in a black circle, the text 'Only: \$24.99/mo', and a green 'Pay with card' button. A grey callout box explains: 'Turn on Creditless Trials for only \$24.99/month. Unlimited in app VPN trials that won't consume credits.' The second section, 'Turn off Creditless Trials', features a large '2' in a black circle and a red 'Turn off' button. A grey callout box explains: 'In app trials will consume credits if turned off.' At the bottom of the page, a black bar contains the text 'AVStream 2018 ©'. The Windows taskbar at the bottom shows several application icons and the system clock displaying 22:29 on 25/10/2018.
